

Formwork Cleaning

using high pressure water

Why High Pressure Water ?

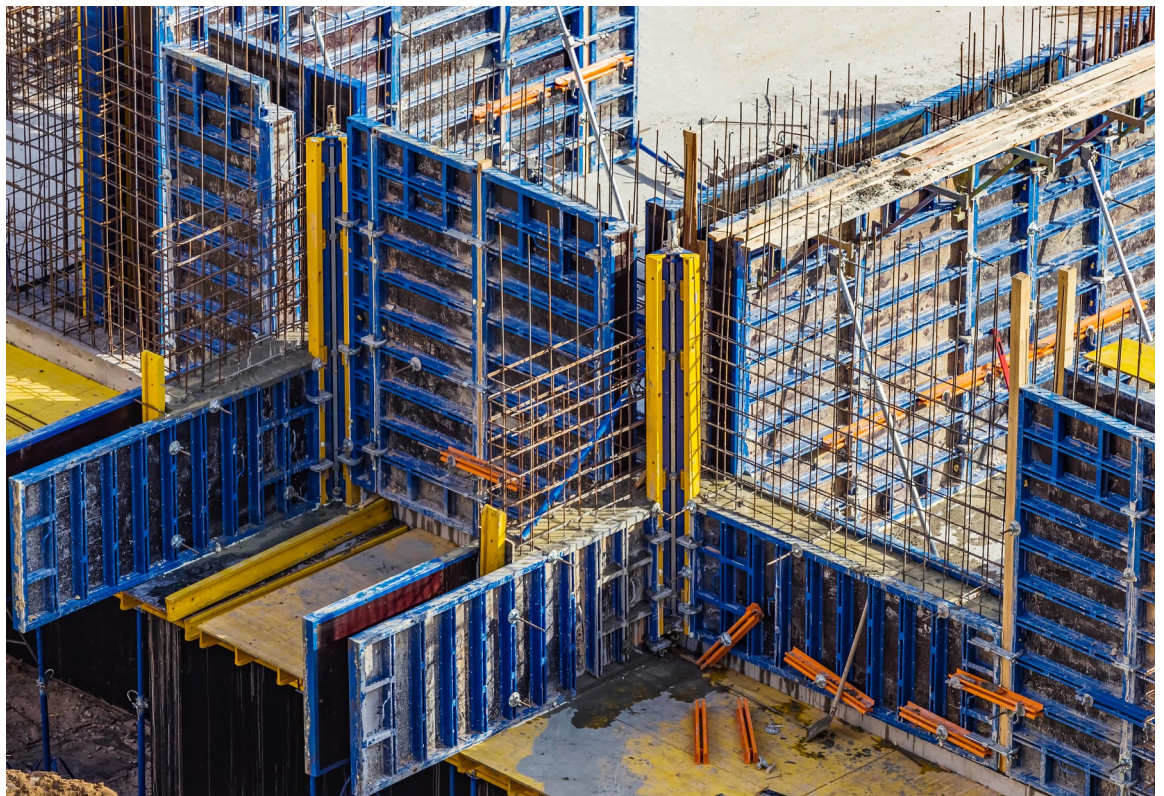

High pressure water removes anything from light concrete residues to heavy encrustation from formwork of varying materials. The formwork is undamaged, the result impressive, and the process efficient. The water is delivered at high pressure from a waterjet pump unit. We offer accessories for differing types and sizes of formwork.

Everything you need for safe, efficient formwork cleaning.

Benefits

- Excellent cleaning results.
- Suitable for various materials.
- Electric pump skid units.
- Stage V diesel pump units.
- Semi-automatic options.
- Full UK spares and service support.
- Full training available.

Formwork Cleaning using high pressure water

Plug and Play Portable Pump Unit

Compact, portable pump unit. High pressure—up to 2,000 bar. Reliable, low lifetime cost. Easy to move. Easy to use.

Electric-driven Pump Unit

From a simple pump skid with basic controls to a fully enclosed unit with performance monitoring and data logging. And everything in between. Operators use these units for permanent or semi permanent locations. Common performance parameters for formwork cleaning are 16 lpm at 1,000 bar.

Everything you need for safe, efficient formwork cleaning.

Line Cleaner

The line cleaner processes large volumes of formwork or scaffolding effectively and efficiently. This method removes the operator from active cleaning area and offers precise and repeatable quality.

AquaBlast Cleaner

These machines cleaning the surface of larger items such as boarding. The rotating spray bar ensures an optimal cleaning performance. The rear castors can be locked for straight running.
