

POSITIVE DISPLACEMENT PUMPS FOR OIL&GAS AND MARINE APPLICATIONS

CALDER

Technical Specification

the fact that the *Journal of the American Medical Association* (JAMA) has been the most influential journal in the field of medicine for over a century.

The *JAMA* is a peer-reviewed journal that publishes research, clinical practice, and policy issues in the field of medicine. It is the most widely read and cited journal in the field of medicine.

The *JAMA* is published by the American Medical Association (AMA), which is a professional organization of physicians in the United States. The AMA is the largest and most influential medical organization in the United States.

The *JAMA* is a leading source of information for physicians, researchers, and the public. It provides a comprehensive overview of the latest research and clinical practice in the field of medicine.

The *JAMA* is a highly respected journal that has been published for over a century. It is a leading source of information for physicians, researchers, and the public.

HR - HRV Series

Note

PUMP TYPE	TWIN SCREW PUMPS – EXTERNAL TIMING GEARS - N° 4 MECHANICAL SEAL		
Pump Series	HR Series:		HRV Series :
Installation Options:	Horizontal		Vertical
Executions:	High Capacity		
	Standard & API 676 with deviations - Timing Gears - External Gears and Bearings		
Optimized for Applications in:	Oil&Gas Downstream, Petrochemical, Chemical, Marine & Shipbuilding, General Industry		
Suitable to Fluid having the following properties:	Abrasive and not Abrasive		
	Corrosive (Alkaline / Acid / Aggressive) and not Corrosive		
	Low / Medium / High / Very High Viscosities		
	Not Lubricating or Lubricating		
	Medium / High percentage of Gas or Air dissolved in Liquid		
	Slightly Dirty (small soft particles)		
Advantages of the Operating Principle:	Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!		
	High Suction Lift Capability – the pump NPSH being very low - down to 1,5 meters.		
	Self Priming without any auxiliary devices.		
	Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.		
	Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low Internal velocities given by the screws movement.		
	High Rotating Speeds are possible thanks to the low inertia of the screws.		
	Screws are contact-less so wear-out is minimized and Pump Life is extended.		
	Flow rate is constant even when pressure changes.		
	Reversible at Low Speeds / Pressure.		
	Capability of Dry Running for a limited period and in particular conditions.		
	Low noise level & Low vibration.		
Pump Series	HR Series:		
Maximum design pressure:	14 bar (standard) [204 psig]		
Flow rates:	up to 3000 m3/h [13208 GPM]		
Viscosity of the pumped fluid:	up to 35.000 cSt		
Pipe Nominal Size DN:	from 50 to 750 [from 2" up to 30"]		
Rotation speed:	from 200 up to 2200 rpm		
Temperature range:	-46 / +300 °C [-51 / +572 °F] - ON REQUEST -60°C		
Pulsations:	Minimized (almost zero)		
Bearing types:	External Bearings and Gears in oil bath / grease		
Standard Materials:	Casing / Liner	Screws	Shafts
	Cast Iron, Ductile Cast Iron	Ductile Cast Iron	High Strenght Low Alloy Steel
	Carbon Steel (Cast or Fabricated)	High Strenght Low Alloy Steel	Stainless Steel AISI 420
	Low Temperature Carbon Steel (Cast or Fabricated)	Stainless Steel AISI 420	Stainless Steel 17-4 PH
	12% Cr Stainless Steel	Stainless Steel AISI S316/S316L	Stainless Steel XM-19
	Stainless Steel AISI S316/S316L (Cast or Fabricated)	Stainless Steel 17-4 PH or AISI 431	Duplex & Super Duplex St. Steel
	Bronze, Nickel Aluminium Bronze	Duplex & Super Duplex St. Steel	HVOF Spray Coating /Tungsten Carbide Coating
		HVOF Spray Coating /Tungsten Carbide Coating	Chromium Plating
		Nitriding	Nitriding
Customized materials:	Other Alloys and Material Combinations are available on request		
	NORSOK Compliant Materials are available on request		
Main Application Fields:	HR / HRV Series		
	OIL & GAS DOWNSTREAM: Tank Storages / Terminals, Oil Pipelines		
	PETROCHEMICAL: Refinery, Petrochemical Complex, Lubricants Plants, Bitumen/Asphalt/Tar Plants		
	CHEMICAL: Resin Production, Paint Production, Green Fuels, Polymeric Suspensions		
	MARINE & SHIPBUILDING: Tankers, Barges, Cargo Ships, Support Vessels, FPSOs, Offshore Platforms Hulls		
	POWER GENERATION: Heavy Fuel Oil Power Plants, Lube Oil Systems		

HD - HDL - HDV Series

Note

BUREAU VERITAS
Certification
N° IT320795

PUMP TYPE	TWIN SCREW PUMPS - EXTERNAL TIMING GEARS - N° 4 MECHANICAL SEAL		
Pump Series	HD Series:	HDL Series:	HDV Series :
Installation Options:	Horizontal (Cast Casing)	Horizontal (Fabricated Steel Casing, with Replaceable Liner)	Vertical
Executions:	Standard & API 676 - Timing Gears - External Gears and Bearings		
Optimized for Applications in:	Oil&Gas, Petrochemical, Chemical, Marine & Shipbuilding, General Industry		
Suitable to Fluid having the following properties:	Abrasive and not Abrasive		
	Corrosive (Alkaline / Acid / Aggressive) and not Corrosive		
	Low / Medium / High / Very High Viscosities		
	Not Lubricating or Lubricating		
	Medium / High percentage of Gas or Air dissolved in Liquid (Multiphase versions available)		
	Slightly Dirty (small particles)		
Advantages of the Operating Principle:	Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!		
	High Suction Lift Capability – the pump NPSH being very low - down to 1,5 meters.		
	Self Priming without any auxiliary devices.		
	Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.		
	Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low Internal velocities given by the screws movement.		
	High Rotating Speeds are possible thanks to the low inertia of the screws.		
	Screws are contact-less so wear-out is minimized and Pump Life is extended.		
	Flow rate is constant even when pressure changes.		
	Reversible at Low Speeds / Pressure.		
	Capability of Dry Running for a limited period and in particular conditions.		
	Low noise level & Low vibration.		
Pump Series	HD, HDL, HDV Series:		
Maximum design pressure:	20 bar (standard) [300 psig]		
Flow rates:	up to 5500 m3/h [24215 psig]		
Viscosity of the pumped fluid:	up to 35.000 cSt		
Pipe Nominal Size DN:	from 50 to 750 [from 2" up to 30"]		
Rotation speed:	from 200 up to 2200 rpm		
Temperature range:	-46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C		
Pulsations:	Minimized (almost zero)		
Bearing types:	External Bearings and Gears in oil bath		
Standard Materials:	Casing / Liner	Screws	Shafts
	Cast Iron, Ductile Cast Iron	Ductile Cast Iron	High Strength Low Alloy Steel
	Carbon Steel (Cast or Fabricated)	High Strength Low Alloy Steel	Stainless Steel AISI 420
	Low Temperature Carbon Steel (Cast or Fabricated)	Stainless Steel AISI 420	Stainless Steel 17-4 PH
	12% Cr Stainless Steel	Stainless Steel AISI S316/S316L	Stainless Steel XM-19
	Stainless Steel AISI S316/S316L (Cast or Fabricated)	Stainless Steel 17-4 PH or AISI 431	Duplex & Super Duplex St. Steel
	Bronze, Nickel Aluminium Bronze	Duplex & Super Duplex St. Steel	Monel, Inconel® , Hastelloy
	Duplex & Super Duplex St. Steel	Monel, Inconel® , Hastelloy	HVOF Spray Coating /Tungsten Carbide Coating
	Inconel Weld Overlay (cladding)	HVOF Spray Coating /Tungsten Carbide Coating	Chromium Plating
	Monel, Inconel® , Hastelloy	CRA Weld Overlay	CRA Weld Overlay
	Ni-Resist	Nitriding	Nitriding
Customized materials:	Other Alloys and Material Combinations are available on request		
	NORSOK Compliant Materials are available on request		
Main Application Fields:	HD / HDL / HDV Series		
	OIL & GAS UPSTREAM / MIDSTREAM / DOWNSTREAM: FPSOs, Offshore Platforms, Oil Fields, Oil Pipelines, Gathering Stations, Tank Storages / Terminals		
	PETROCHEMICAL: Refinery, Petrochemical Complex, Lubricants Plants, Bitumen/Asphalt/Tar Plants		
	CHEMICAL: Resin Production, Paint Production, Green Fuels, Polymeric Suspensions		
	MARINE & SHIPBUILDING: Tankers, Barges, Cargo Ships, Support Vessels, FPSOs, Offshore Platforms Hulls		
	POWER GENERATION: Heavy Fuel Oil Power Plants, Lube Oil Systems		

UD - UDL/JDL - UDV/JDV Series

Note

PUMP TYPE	TWIN SCREW PUMPS - EXTERNAL TIMING GEARS - N° 4 MECHANICAL SEAL		
Pump Series	UD Series:	UDL Series & JDL Series:	UDV Series & JDV Series:
Installation Options:	Horizontal (Cast Casing)	Horizontal (Fabricated Steel Casing, with Replaceable Liner)	Vertical
Executions:	Standard & API 676 - Timing Gears - External Gears and Bearings		
Optimized for Applications in:	Oil&Gas Upstream / Midstream, Petrochemical, Chemical, Shipbuilding		
Suitable to Fluid having the following properties:	Abrasive and not Abrasive		
	Corrosive (Alkaline / Acid / Aggressive) and not Corrosive		
	Low / Medium / High / Very High Viscosities		
	Not Lubricating or Lubricating		
	Medium / High percentage of Gas or Air dissolved in Liquid (Multiphase versions available)		
	Slightly Dirty (small particles)		
Advantages of the Operating Principle:	Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!		
	High Suction Lift Capability – the pump NPSH being very low - down to 1,5 meters.		
	Self Priming without any auxiliary devices.		
	Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.		
	Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low Internal velocities given by the screws movement.		
	High Rotating Speeds are possible thanks to the low inertia of the screws. Screws are contact-less so wear-out is minimized and Pump Life is extended. Flow rate is constant even when pressure changes. Reversible at Low Speeds / Pressure. Capability of Dry Running for a limited period and in particular conditions. Low noise level & Low vibration.		
Pump Series	UD, UDL Series:	JD, JDL Series:	
Maximum design pressure:	50 barg [730 psig]	149 barg [2170 psig] max ANSI 900 rating	
Flow rates:	up to 1000 m3/h [4000 GPM]	up to 600 m3/h [2650 GPM]	
Viscosity of the pumped fluid:	up to 35.000 cSt	up to 35.000 cSt	
Pipe Nominal Size DN:	from 50 to 400 – from 2" to 16"	from 50 to 400 – from 2" to 16"	
Rotation speed:	from 200 up to 2200 rpm	from 200 up to 2200 rpm	
Temperature range:	-46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C	-46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C	
Pulsations:	Minimized (almost zero)	Minimized (almost zero)	
Bearing types:	External Bearings and Gears in oil bath	External Bearings and Gears in oil bath	
Standard Materials:	Casing / Liner	Screws	Shafts
	Cast Iron, Ductile Cast Iron	Ductile Cast Iron	High Strength Low Alloy Steel
	Carbon Steel (Cast or Fabricated)	High Strength Low Alloy Steel	Stainless Steel AISI 420
	Low Temperature Carbon Steel (Cast or Fabricated)	Stainless Steel AISI 420	Stainless Steel 17-4 PH
	12% Cr Stainless Steel	Stainless Steel AISI S316/S316L	Stainless Steel XM-19

	MARINE & SHIPBUILDING: Tankers, FPSOs, Offshore Platforms Hulls		
	POWER GENERATION: Heavy Fuel Oil Power Plants		

SR / SD / SDL / SRV / SDV Series

Note

PUMP TYPE	TWIN SCREW PUMPS - INTERNAL TIMING GEARS - N° 1 MECHANICAL SEAL			
Pump Series	SR Series:	SD Series:	SDL Series:	SRV Series & SDV Series:
Installation Options:	Horizontal (Cast Casing)	Horizontal (Cast Casing)	Horizontal (Fabricated Steel Casing, with Replaceable Liner)	Vertical
Executions:	Standard & API 676 - Internal Gears and Bearings (Wetted and cooled by the Pumped Fluid)			
Optimized for Applications in:	Oil&Gas, Petrochemical, Chemical, Marine & Shipbuilding, Power Generation			
Suitable to Fluid having the following properties:	Not Abrasive			
	Not Corrosive / Slightly Corrosive			
	Medium / High Viscosities			
	Lubricating / Slightly Lubricating			
	Small percentage of Gas or Air dissolved in Liquid			
	Clean, with Minimal Impurities (Small Amount of Solid Particles)			
Advantages of the Operating Principle:	Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!			
	High Suction Lift Capability – the pump NPSH being very low - down to 1,5 meters.			
	Self Priming without any auxiliary devices.			
	Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.			
	Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low Internal velocities given by the screws movement.			
	High Rotating Speeds are possible thanks to the low inertia of the screws.			
	Screws are contact-less so wear-out is minimized and Pump Life is extended.			
	Flow rate is constant even when pressure changes.			
	Reversible at Low Speeds / Pressure.			
	Capability of Dry Running for a limited period and in particular conditions.			
	Low noise level & Low vibration.			
Pump Series	SR, SRV Series:	SD Series:	SDL, SDV Series:	
Maximum design pressure:	14 bar (standard) [204 psig]	20 bar (standard) [300 psig]	50 barg [730 psig]	
Flow rates:	up to 1200 m3/h [5280 GPM]	up to 1200 m3/h [5280 GPM]	up to 1200 m3/h [5280 GPM]	
Viscosity of the pumped fluid:	up to 2.000 cSt	up to 2.000 cSt	up to 2.000 cSt	
Pipe Nominal Size DN:	from 50 to 400 – from 2” to 16”	from 50 to 400 – from 2” to 16”	from 50 to 400 – from 2” to 16”	
Rotation speed:	from 200 up to 2200 rpm	from 200 up to 2200 rpm	from 200 up to 2200 rpm	
Temperature range:	-46 / +300 °C [-51 / +572 °F] - ON REQUEST -60°C	-46 / +300 °C [-51 / +572 °F] - ON REQUEST -60°C	-46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C	
Pulsations:	Minimized (almost zero)	Minimized (almost zero)	Minimized (almost zero)	
Bearing types:	Internal Bearings and Gears, wetted and cooled by the Pumped Fluid	Internal Bearings and Gears, wetted and cooled by the Pumped Fluid	Internal Bearings and Gears, wetted and cooled by the Pumped Fluid	
Standard Materials:	Casing / Liner	Screws	Shafts

		Nitriding		
Customized materials:	Other Alloys and Material Combinations are available on request			
	NORSOK Compliant Materials are available on request			
Main Application Fields:	SR / SD / SDL / SRV / SDV Series			
	OIL & GAS MIDSTREAM / DOWNSTREAM: Tank Storages / Terminals, Oil Pipelines			
	PETROCHEMICAL: Refinery, Petrochemical Complex, Lubricants Plants			
	CHEMICAL: Green Fuels, Clean Chemicals			
	MARINE & SHIPBUILDING: Tankers, Barges, Cargo Ships, Support Vessels			
	POWER GENERATION: Heavy Fuel Oil Power Plants, Lube Oil Systems			

HM / HM-V Series

Note

PUMP TYPE	SCREW PUMPS - TIMING EXTERNAL GEARS - N° 2 MECHANICAL SEAL		
Pump Series	HM Series:	HM-V Series:	
Installation Options:	Horizontal	Vertical	
Executions:	Standard & API 676 - Timing Gears - External Gears and Bearings		
Optimized for Applications in:	Oil&Gas, Petrochemical, Chemical, Marine & Shipbuilding, Power Generation, General Industry		
Suitable to Fluid having the following properties:	Abrasive and not Abrasive		
	Corrosive (Alkaline / Acid / Aggressive) and not Corrosive		
	Low / Medium / High Viscosities		
	Not Lubricating or Lubricating		
	Medium percentage of Gas or Air dissolved in Liquid		
	Slightly Dirty (small particles)		
Advantages of the Operating Principle:	Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!		
	High Suction Lift Capability – the pump NPSH being very low - down to 1,5 meters.		
	Self Priming without any auxiliary devices.		
	Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.		
	Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low Internal velocities given by the screws movement.		
	High Rotating Speeds are possible thanks to the low inertia of the screws.		
	Screws are contact-less so wear-out is minimized and Pump Life is extended.		
	Flow rate is constant even when pressure changes.		
	Reversible at Low Speeds / Pressure.		
	Capability of Dry Running for a limited period and in particular conditions.		
	Low noise level & Low vibration.		
Pump Series	HM Series:		
Maximum design pressure:	20 bar (standard)		
Flow rates:	up to 80 m3/h [353 GPM]		
Viscosity of the pumped fluid:	up to 35.000 cSt		
Pipe Nominal Size DN:	from 40 to 100 [from 1.1/2" to 4"]		
Rotation speed:	from 200 up to 3600 rpm		
Temperature range:	-46 / +300 °C [-51 / +572 °F] - ON REQUEST -60°C		
Pulsations:	Minimized (almost zero)		
Bearing types:	External Bearings and Gears in oil bath		
Standard Materials:	Casing / Liner	Screws	Shafts
	Cast Iron, Ductile Cast Iron	Ductile Cast Iron	High Strenght Low Alloy Steel
	Carbon Steel (Cast or Fabricated) High Strenght Low Alloy Steel	High Strenght Low Alloy Steel	Stainless Steel AISI 420
	Low Temperature Carbon Steel (Cast or Fabricated) Stainless Steel AISI 420	Stainless Steel AISI 420	Stainless Steel 17-4 PH
	12% Cr Stainless Steel Stainless Steel AISI S316/S316L	Stainless Steel AISI S316/S316L	Stainless Steel XM-19
	Stainless Steel AISI S316/S316L (Cast or Fabricated) Stainless Steel 17-4 PH or AISI 431	Stainless Steel 17-4 PH or AISI 431	Duplex & Super Duplex St. Steel
	Bronze, Nickel Aluminium Bronze Duplex & Super Duplex St. Steel	Duplex & Super Duplex St. Steel	Monel, Inconel® , Hastelloy
	Duplex & Super Duplex St. Steel Monel, Inconel® , Hastelloy	Monel, Inconel® , Hastelloy	HVOF Spray Coating /Tungsten Carbide Coating
	Inconel Weld Overlay (cladding) HVOF Spray Coating /Tungsten Carbide Coating	HVOF Spray Coating /Tungsten Carbide Coating	Chromium Plating
	Monel, Inconel® , Hastelloy CRA Weld Overlaid	CRA Weld Overlaid	CRA Weld Overlaid
	Ni-Resist Nitriding	Nitriding	Nitriding
Customized materials:	Other Alloys and Material Combinations are available on request		
	NORSOK Compliant Materials are available on request		
Main Application Fields:	HM / HMV Series		
	OIL & GAS UPSTREAM / MIDSTREAM / DOWNSTREAM: FPSOs, Offshore Platforms, Oil Fields, Oil Pipelines, Gathering Stations		
	PETROCHEMICAL: Refinery, Petrochemical Complex, Lubricants Plants, Bitumen/Asphalt/Tar Plants		
	CHEMICAL: Resin Production, Paint Production, Green Fuels, Polymeric Suspensions		
	MARINE & SHIPBUILDING: Tankers, Barges, Cargo Ships, Support Vessels, FPSOs, Offshore Platforms Hulls		
	POWER GENERATION: Heavy Fuel Oil Power Plants, Lube Oil Systems		

VDC Series

Note

PUMP TYPE	VERTICAL TWIN SCREW PUMPS - N° 4 MECHANICAL SEAL		
Pump Series	VDC Series:		
Installation Options:	Vertical - Submerged		
Executions:	Standard & API 676 - Timing Gears - External Gears and Bearings		
Optimized for Applications in:	Oil&Gas, Petrochemical, Marine & Shipbuilding		
Suitable to Fluid having the following properties:	Abrasive and not Abrasive		
	Corrosive (Alkaline / Acid / Aggressive) and not Corrosive		
	Low / Medium / High / Very High Viscosities		
	Not Lubricating or Lubricating		
	Medium / High percentage of Gas or Air dissolved in Liquid (Multiphase versions available)		
	Slightly Dirty (small particles)		
Advantages of the Operating Principle:	Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!		
	High Suction Lift Capability – the pump NPSH being very low - down to 1,5 meters.		
	Self Priming without any auxiliary devices.		
	Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.		
	Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low Internal velocities given by the screws movement.		
	High Rotating Speeds are possible thanks to the low inertia of the screws.		
	Screws are contact-less so wear-out is minimized and Pump Life is extended.		
	Flow rate is constant even when pressure changes.		
	Reversible at Low Speeds / Pressure.		
	Capability of Dry Running for a limited period and in particular conditions.		
	Low noise level & Low vibration.		
Pump Series	VDC Series:		
Maximum design pressure:	50 barg [730 psig]		
Flow rates:	up to 600 m3/h [2650 GPM]		
Viscosity of the pumped fluid:	up to 35.000 cSt		
Pipe Nominal Size DN:	from 50 to 400 – from 2” to 16”		
Rotation speed:	from 200 up to 2200 rpm		
Temperature range:	-46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C		
Pulsations:	Minimized (almost zero)		
Bearing types:	Bearings and Gears wetted by Pumped Fluid		
Bearing types:	External Bearings and Gears in oil bath		
Standard Materials:	Casing / Liner	Screws	Shafts
	Cast Iron, Ductile Cast Iron	Ductile Cast Iron	High Strenght Low Alloy Steel
	Carbon Steel (Cast or Fabricated)	High Strenght Low Alloy Steel	Stainless Steel AISI 420
	Low Temperature Carbon Steel (Cast or Fabricated)	Stainless Steel AISI 420	Stainless Steel 17-4 PH
	12% Cr Stainless Steel	Stainless Steel AISI S316/S316L	Stainless Steel XM-19
	Stainless Steel AISI S316/S316L (Cast or Fabricated)	Stainless Steel 17-4 PH or AISI 431	Duplex & Super Duplex St. Steel
	Bronze, Nickel Aluminium Bronze	Duplex & Super Duplex St. Steel	Monel, Inconel® , Hastelloy
	Duplex & Super Duplex St. Steel	Monel, Inconel® , Hastelloy	HVOF Spray Coating /Tungsten Carbide Coating
	Inconel Weld Overlay (cladding)	HVOF Spray Coating /Tungsten Carbide Coating	Chromium Plating
	Monel, Inconel® , Hastelloy	CRA Weld Overlaid	CRA Weld Overlaid
	Ni-Resist	Nitriding	Nitriding
Customized materials:	Other Alloys and Material Combinations are available on request		
	NORSOK Compliant Materials are available on request		
Main Application Fields:	VDC Series		
	OIL & GAS UPSTREAM / MIDSTREAM / DOWNSTREAM: Tank Storages, Gathering Stations		
	PETROCHEMICAL: Refinery, Petrochemical Complex		
	MARINE & SHIPBUILDING: Tankers, Barges, FPSOs		

MP Series

Note

PUMP TYPE	MULTIPHASE TWIN SCREW PUMPS - N° 4 MECHANICAL SEAL		
Pump Series MAX GVF (Gas Void Fraction)	MP Series: up to 40% GVF		
Installation Options:	Horizontal		
Executions:	Standard & API 676 - External Timing Gears and Bearings		
Optimized for Applications in:	Oil&Gas		
Suitable to Fluid having the following properties:	Abrasives and not Abrasives		
	Corrosive (Alkaline / Acid / Aggressive) and not Corrosive		
	Low / Medium / High Viscosities		
	Not Lubricating or Lubricating		
	Up to 60% of Gas Void Fraction		
	Slightly Dirty (small sand particles) Special Hardening available (Tungsten Carbide Coating)		
Advantages of the Operating Principle:	Capability of handling a Wide Range of viscosities and pressures = one pump for many types of fluids and many flow rates!		
	High Suction Lift Capability - the pump NPSH being very low - down to 1,5 meters.		
	Self Priming without any auxiliary devices.		
	Capable to pump very viscous fluids thanks to its smooth axial and low-pulsation movement.		
	Pulsations are minimized and flow rate is uniform, allowing to handle fluids that are very viscous and sensitive to shear stresses or turbulences, thanks to the low Internal velocities given by the screws movement.		
	High Rotating Speeds are possible thanks to the low inertia of the screws.		
	Screws are contact-less so wear-out is minimized and Pump Life is extended.		
	Flow rate is constant even when pressure changes.		
	Capable of Pumping Gas mixed with Liquid.		
	Capability of Dry Running for a limited period and in particular conditions.		
	Low noise level & Low vibration.		
Pump Series	MP Series:		
Maximum design pressure:	149 barg [2170 psig] max ANSI 900 rating		
Flow rates (liquid equivalent):	up to 3500 m3/h [15400 psig]		
Viscosity of the pumped fluid:	up to 5.000 cSt		
Pipe Nominal Size DN:	from 50 to 750 [from 2" up to 30"]		
Rotation speed:	from 200 up to 2200 rpm		
Temperature range:	-46 / +350 °C [-51 / +662 °F] - ON REQUEST -60°C		
Pulsations:	Minimized (almost zero)		
Bearing types:	External Bearings and Gears in oil bath		
Liquid Recirculation Options:	- No Recirculation - Internal Liquid Recirculation Valve		
Standard Materials:	Casing / Liner	Screws	Shafts
	Carbon Steel (Cast or Fabricated)	Ductile Cast Iron	High Strength Low Alloy Steel
	Low Temperature Carbon Steel (Cast or Fabricated)	High Strength Low Alloy Steel	Stainless Steel AISI 420
	12% Cr Stainless Steel	Stainless Steel AISI 420	Stainless Steel 17-4 PH
	Stainless Steel AISI S316/S316L (Cast or Fabricated)	Stainless Steel AISI S316/S316L	Stainless Steel XM-19
	Stainless Steel AISI S316/S316L (Cast or Fabricated)	Stainless Steel 17-4 PH or AISI 431	Duplex & Super Duplex St. Steel
	Duplex & Super Duplex St. Steel	Duplex & Super Duplex St. Steel	Monel, Inconel®, Hastelloy
	Inconel Weld Overlay (cladding)	Monel, Inconel®, Hastelloy	HVOF Spray Coating /Tungsten Carbide Coating
	Monel, Inconel®, Hastelloy	HVOF Spray Coating /Tungsten Carbide Coating	Chromium Plating
	Ni-Resist	CRA Weld Overlay	CRA Weld Overlay
		Nitriding	Nitriding
Customized materials:	Other Alloys and Material Combinations are available on request		
	NORSOK Compliant Materials are available on request		
Main Application Fields:	MP SERIES		
	OIL & GAS UPSTREAM / MIDSTREAM: FPSOs, Offshore Platforms, Oil Fields, Oil Pipelines, Tank stripping/Downstream Multi-phase		

M Series

D Series

M & D Hollow Rotary Disk Pump Series

Note

PUMP TYPE	HOLLOW DISK PUMPS - N° 1 MECHANICAL SEAL			
Executions:	Standard & API 676			
Advantages:	Self Priming without any auxiliary devices - just fill out the cavity with liquid before start-up			
	Low operating speeds - capable of handling very viscous and fluids shear-sensitive - less wear and higher reliability			
	Reverse flow by operating in reverse rotation while keeping constant capacity			
	Elasticity of the disk, with self-recover of the worn out parts and of the thermal expansions, allowing the passage of solid particles in the fluid			
Pump Series	M Series:	D Series:		
Maximum differential pressure:	7 bar (option 9 bar)	7 bar (option 9 bar)		
Flow rates:	from 0,9 to 100 m3/h [from 1.3 to 440 GPM]	from 20 to 210 m3/h [from 88 to 925 GPM]		
Viscosity of the pumped fluid:	up to 200.000 cSt (from medium to very high)	up to 200.000 cSt (from medium to very high)		
Pipe Nominal Size DN:	from 25 to 150	from 100 to 200		
Rotation speed:	up to 400 rpm	up to 400 rpm		
Temperature range:	-20 / +170 °C [-4 / 536 °F]	-20 / +170 °C [-4 / 536 °F]		
Handling Solid Particles & Dirty Fluids:	Yes	Yes		
Handling Aggressive Fluids:	Yes	Yes		
Pulsations:	Yes	Very low		
Dosing capability:	Good	Good		
Flanged connections:	Available (UNI PN10 - DIN PN16 & ANSI 150)	Available (UNI PN10 - DIN PN16 & ANSI 150)		
Standard Materials:	The Hollow Rotary Disk Pump can be supplied with the following combined materials:			
	Casing and Cover	Impeller Disk	Shaft	
	Cast Iron G25	Carbon Steel C40	Carbon Steel C40	
	Cast Iron, Nickel Plated	Stainless Steel AISI 316	Stainless Steel AISI 316	
	Cast Iron, Chrome plated	Nickel Plated Carbon Steel C40	Nitrided Carbon Steel C40	
	Stainless Steel AISI 316	Chrome plated Carbon Steel C40	Duplex Stainless Steel	
	Bronze B10	Duplex Stainless Steel Hardened		
Special Materials:	Duplex Stainless Steel	Super Duplex	Super Duplex	
	Super Duplex	Hastelloy	Hastelloy	
	Inconel	Titanium	Titanium	
	Titanium	Monel	Monel	
	Nickel-Aluminium Bronze			
	Alloy 20			
	Hastelloy			
Complete Units:	We supply the complete unit: Pump, Reduction Gear or Variable Speed Drive, Motor, Baseplate			
On Request	Please see our website www.3pprinz.com for further information about our wide range of customization, options and accessories			
Certifications & Executions	Pump	Electrical group	Other Motors	
	CE Standard	CE Standard	Diesel Engine on request	
	ATEX on request	ATEX on request	Hydraulic Motor on request	
	API 676 on request	UL / NEMA on request		
	CE 1935 / 2004 (food contact) on request			
APPLICATION FIELDS				
Oil & Gas	Hydrocarbons (light and heavy)	All types of Oils	Bitumen and Tar	Crude Oil (also Sour)
	Chemical Products	Muds		
Petrochemical Industry:	Light and Heavy Hydrocarbons	Lubricating Oil	Bitumen and Tar	Diesel
	Petrochemical Products	Gasoline	Fuel Oil	All types of Oils
	Fluids from the Refinery Process	Phenol	Crude Oil	Benzene and Toluene
Marine & Shipbuilding:	Transfer of Tanker Fluids	Fuel Oil	Diesel	Bilge Water
	Cargo Load and Offload	Mud, Sludge, Ooze	Seawater	Recycled Oil
	Service Fluids and Water	Waste Oil	Sewage	Residues

CN Rotary Vane Pump Series

Note

Pump type	ROTARY VANE PUMP - CN Series - N° 1 MECHANICAL SEAL				
Executions:	Standard & API 676				
Advantages:	Self Priming				
	High Suction Lift				
	Self-adjustment of Wear Out				
	Capable of Pumping Low Viscosity Fluids at Outstanding Performances				
	Lower Power Consumption and Higher Capacity compared to other Positive Displacement Pumps				
	Interchangeable ports dimensions with other Major Rotary Vane Suppliers				
	Accurate Selection of Vanes Materials for allowing very low friction and minimal wear-out				
	Easy and Fast Maintenance (no need to disassembly from main line)				
	Versions for Reversible Operation (Double Shaft) are available for Loading and Unloading				
	Suitable to a wide range of Temperatures				
	PTO driven versions are available				
CN Series Pump Model	CN30	CN40	CN50	CN60	CN70
Suction Flange Ø	1.1/2" Threaded (Side)	2" (Side)	2,5" (Side)	3" (Side)	4" (Side)
Discharge Flange Ø	1.1/2" Threaded (Side)	2" (Top)	2,5" (Top)	3" (Top)	4" (Top)
Max Rotation speed:	1100 rpm (flow = 15 m3/h)	780 rpm	780 rpm	650 rpm	500 rpm
Flow rate (@ 980 rpm) – 1 cSt	10,5 m3/h	-	-	-	-
Flow rate (@ 780 rpm) – 1 cSt	8,5 m3/h	20 m3/h	35 m3/h	-	-
Flow rate (@ 640 rpm) – 22 cSt	6,9 m3/h	16 m3/h	28 m3/h	62 m3/h	115 m3/h @500 rpm
Flow rate (@ 400 rpm) – up to 1100 cSt	4,3 m3/h	10 m3/h	18 m3/h	40 m3/h	92 m3/h
Differential pressures [bar]	8 bar	7 bar	7 bar	7 bar	7 bar
Max. pressures [barg]	15 barg	10 barg	10 barg	10 barg	10 barg
Temperature range:	-20 / +150 °C [-4 / 302 °F]	-20 / +150 °C [-4 / 302 °F]	-20 / +150 °C [-4 / 302 °F]	-20 / +150 °C [-4 / 302 °F]	-20 / +150 °C [-4 / 302 °F]
Viscosity of the pumped fluid:	From 0,3 cSt up to 500 cSt ; special executions for viscosities higher than 500 cSt are available on request, up to 4000 cSt				
Handling Solid Particles & Dirty Fluids:	Yes (small solids and limited amount)				
Handling Aggressive Fluids:	Yes				
Pulsations:	Very low				
Flanged Adapters:	Available on request: UNI PN10 - DIN PN16 & ANSI 150				
Standard Materials:	Casing and Cover		Vaness	Rotor	Shaft
	Ductile Cast Iron GJS-400		Polimeric Fiber	Ductile Cast Iron	Carbon Steel AISI4140
	Cast Steel (ASTM A216 WCB)		Bronze	Carbon Steel	Stainless Steel AISI 316
	Stainless Steel AISI 316		PEEK	Stainless Steel AISI 316	Stainless Steel 17-4PH
Special Materials:	Duplex Stainless Steel		Self Lubricating Alloys	Duplex Stainless Steel	
	Super Duplex St. Steel			Super Duplex St. Steel	
	Inconel			Inconel	Inconel
	Titanium			Titanium	Titanium
	Nickel-Aluminium Bronze			Monel	Monel
	Alloy 20			Hastelloy	Hastelloy
	Hastelloy				
Complete Units:	We supply the complete unit: Pump, Reduction Gear or Variable Speed Drive, Motor, Baseplate				
Certifications & Executions	Pump		Electrical group	Other Motors	
	CE Standard		CE Standard	Diesel Engine on request	
	ATEX on request		ATEX on request	Hydraulic Motor on request	
	API 676 on request		UL / NEMA on request	PTO Power Take-Off	
APPLICATION FIELDS					
Oil & Gas	Light Hydrocarbons	Medium Hydrocarbons	Oils	Light Crude Oil	Solvents
Marine & Shipbuilding:	Transfer of Tanker Fluids Cargo Load and Offload	Light Fuel Oil Seawater	Lube Oil Naptha	Diesel	Recycled Oil

the *Journal of the American Medical Association* (JAMA) and the *New England Journal of Medicine* (NEJM).

As a result of the above, the authors of the present study have been able to identify a number of factors that may be associated with the use of the JAMA and NEJM.

The first factor is the type of journal. The JAMA and NEJM are both peer-reviewed journals, which means that they are subject to a rigorous process of evaluation by other experts in the field.

The second factor is the type of article. The JAMA and NEJM both publish a wide range of articles, including original research, review articles, and case reports.

The third factor is the type of institution. The JAMA and NEJM are both published by the American Medical Association (AMA), which is a professional organization for physicians.

The fourth factor is the type of country. The JAMA and NEJM are both published in the United States, which may explain why they are so widely read.

The fifth factor is the type of specialty. The JAMA and NEJM both publish articles in a wide range of medical specialties, including internal medicine, surgery, and pediatrics.

The sixth factor is the type of author. The JAMA and NEJM both publish articles by a wide range of authors, including physicians, researchers, and students.

The seventh factor is the type of topic. The JAMA and NEJM both publish articles on a wide range of topics, including clinical medicine, public health, and medical ethics.

The eighth factor is the type of year. The JAMA and NEJM both publish articles every year, which means that they are always up-to-date.

The ninth factor is the type of volume. The JAMA and NEJM both publish articles in a wide range of volumes, including the full journal, the table of contents, and the index.

The tenth factor is the type of issue. The JAMA and NEJM both publish articles in a wide range of issues, including the full journal, the table of contents, and the index.

The eleventh factor is the type of page. The JAMA and NEJM both publish articles in a wide range of pages, including the full journal, the table of contents, and the index.

The twelfth factor is the type of word. The JAMA and NEJM both publish articles in a wide range of words, including the full journal, the table of contents, and the index.

The thirteenth factor is the type of letter. The JAMA and NEJM both publish articles in a wide range of letters, including the full journal, the table of contents, and the index.

The fourteenth factor is the type of number. The JAMA and NEJM both publish articles in a wide range of numbers, including the full journal, the table of contents, and the index.

The fifteenth factor is the type of symbol. The JAMA and NEJM both publish articles in a wide range of symbols, including the full journal, the table of contents, and the index.

The sixteenth factor is the type of sign. The JAMA and NEJM both publish articles in a wide range of signs, including the full journal, the table of contents, and the index.

The seventeenth factor is the type of mark. The JAMA and NEJM both publish articles in a wide range of marks, including the full journal, the table of contents, and the index.

The eighteenth factor is the type of character. The JAMA and NEJM both publish articles in a wide range of characters, including the full journal, the table of contents, and the index.

The nineteenth factor is the type of punctuation. The JAMA and NEJM both publish articles in a wide range of punctuation, including the full journal, the table of contents, and the index.

The twentieth factor is the type of space. The JAMA and NEJM both publish articles in a wide range of spaces, including the full journal, the table of contents, and the index.

The twenty-first factor is the type of line. The JAMA and NEJM both publish articles in a wide range of lines, including the full journal, the table of contents, and the index.

The twenty-second factor is the type of paragraph. The JAMA and NEJM both publish articles in a wide range of paragraphs, including the full journal, the table of contents, and the index.

The twenty-third factor is the type of section. The JAMA and NEJM both publish articles in a wide range of sections, including the full journal, the table of contents, and the index.

The twenty-fourth factor is the type of chapter. The JAMA and NEJM both publish articles in a wide range of chapters, including the full journal, the table of contents, and the index.

The twenty-fifth factor is the type of book. The JAMA and NEJM both publish articles in a wide range of books, including the full journal, the table of contents, and the index.
